# SUPERIOR WEATHER PROTECTION WITH FASTER, EASIER ACCESS

Coast sliding roofs are designed to glide effortlessly back and forth. They are built to withstand the tough operating environment they are used in. Above all they deliver value, saving you time and money.

## WHY COAST?

### ✓ Faster, Easier Access

Keeps the weather out and saves you time and money when accessing your stored material. All roofs come standard with a mechanical winch, ensuring the roofs move back and forth easily every time.

### ✓ Durable, built to last

Coast sliding roofs are manufactured in New Zealand using super strong galvanised box section frames and steel pipe. All roofs have an anti-lift system for windy conditions

### ✓ Slides effortlessly

Coast's unique Ezy-Slide technology does away with moving parts reducing the opportunity for the roof to seize and enabling the roofs to "Coast" back and forth effortlessly.

### ✓ Extended service life

Coast roofs are modular in design extending their service life and making maintenance a breeze. The heavy duty canvas cover has a 3 year UV warranty

### ✓ Reduced roof footprint

Coast roofs concertina on themselves reducing the foot print of the roof.

### ✓ Standard & Custom Designs

Coast offers a range of roofs, from our standard designs to fully customised roofs to suit virtually any structure.

### ✓ Cladding Options

Coast standard roofs come with Canvas covers but Steel Cladding can also be chosen as an option.

## QUALITY, INNOVATE SLIDING ROOFS

Coast's innovative retractable sliding roof's modular design provides the basis for a number of standard configurations and makes it easy to customise roofs for different bin types and sizes. The unique design is protected by a number of design registrations.

### Standard Roofs

Coast currently have two standard roof designs for precast concrete panel bins and two standard roof designs for four mass block bin configurations.

#### Panel Bins

5m x 7.5m / 5m x 10m

#### Mass Block bins (Single/Twin)

4.2m x 7.2m / 4.2m x 9.6m

### Custom Roofs

Coast offer fully customised options to suit most bin types, from Panel bins, Post & Rail bins, Masonry block bins through to Mass Concrete block bins. All our roofs are constructed to the same high standard incorporating a modular design with the heavy duty galvanised steel frame. The only requirements are that the bins are no wider than 6000mm and less than 12mtr in length.

### Cladding Options

**Canvas** – Manufactured from Maxlite PE™ material the canvas covers provides a lightweight but robust cover solution for most applications.

**Metal** – Metal Cladding is available instead of canvas. Perfect for tough environments, or high wind areas.

### Optional Extras

Coast is committed to innovation and development. We are constantly seeking new and improved ways of doing things. In addition to the standard features included in every Coast roof we offer a range of add-on products.

**Automatic Winch System:** Imagine a roof that operated the same way as an automatic garage door. The idea is now a reality with Coast's automatic winch system. This remote operated winch enables the operator to open the roof without getting out of his vehicle, simply push the button and watch it slide back and forth. The winch system runs off solar power eliminating the issue of power supply.

**Front Cover:** Coast offers a range of front cover options to suit our customer's individual requirements. From flexible low cost canvas flaps, to heavy duty steel doors we offer customised front cover solutions.

## ABOUT COAST

"It's a hard job finding the perfect retractable roof" was a complaint from many customers. So Coast set about designing a retractable roof system as close to 'perfect' as possible. Over two years we talked to farmers about what a 'perfect' sliding roof would have. It quickly became apparent that farmers wanted a quality roof that was easily operated, and didn't take up much space. Coast then added on a fourth requirement, it had to be cost effective. Out of this was born Coast Sliding Roofs.

At Coast we are passionate about the product and stand behind everything that we do. We believe we have designed and built a sliding roof system that we think is fairly close to the 'perfect one'. We believe you will find our sliding roofs give you years of trouble free service, and are built strong to withstand tough operating environments.

Above all we are proud to say our roofs are Kiwi made.
